

Prashant Tukadiya

Senior iOS Engineer · 10+ Years · Swift · UIKit · SwiftUI · ARKit · SceneKit · Offline Systems

Porbandar, India · +91 9924263125 · tukadiyaprashant@gmail.com · [Stack Overflow 16k+](#)

PROFILE

iOS engineer with 10+ years of experience building production applications across dental, industrial AR, realtime communication, safety, and consumer domains. Strong focus on graphics-heavy rendering (SceneKit, ARKit, RealityKit), offline-first architecture, and realtime systems — areas where the engineering complexity goes well beyond typical app development. Shipped 15+ live applications across Israeli, Indian, and US markets, taking full ownership from architecture through App Store release and post-production maintenance.

Comfortable working across the full iOS stack — UI, data layer, networking, performance profiling, crash analysis — and experienced collaborating directly with product, design, hardware, and clinical stakeholders. Strong track record on long-running products that require both technical depth and ongoing iteration.

EXPERIENCE

Senior iOS Engineer

Feb 2020 – Present

Smilefy Inc. · Remote · Contract

Lead iOS engineer on a dental smile-design platform used by clinics globally. Core of the work is a SceneKit-based simulation engine — 3D tooth model manipulation, real-world measurement overlays, and before/after visualization running at interactive frame rates on device. Worked directly with dental professionals to validate workflows and iterate on clinical UX.

Designed the offline data architecture to handle large case files reliably in low-connectivity clinic environments. Adopted Swift Concurrency (async/await) for async data flows and background processing. Responsible for end-to-end releases — build, TestFlight distribution, crash triage via Crashlytics, performance profiling with Instruments, unit testing with XCTest, and App Store submissions across multiple versions.

iOS Developer

Dec 2017 – Feb 2020

Plutomen Technologies · Ahmedabad, India · Full-Time

Built enterprise AR/MR applications for industrial clients. The flagship product was a remote-assistance platform where field technicians receive live expert guidance via video call with AR annotations overlaid on their camera feed — spatial markers anchored to real equipment via ARKit. Developed the WebRTC video communication layer and the ARKit-based annotation system, and worked with hardware teams on-site to validate spatial accuracy against physical machines.

Also delivered an ARKit measurement application with fully on-device spatial calculations, a restaurant order-notification system, and an event companion app for a major national startup summit.

iOS Developer

Jul 2015 – Dec 2017

WeblinelIndia · Ahmedabad, India · Full-Time

Worked across a range of client iOS projects covering safety, consumer marketplace, social, and enterprise domains — building features, integrating third-party SDKs, REST APIs, and payment gateways, and seeing apps through App Store submission and post-launch support. Gained broad hands-on experience across different product types and client requirements across Israeli, Indian, and US markets.

Projects included a child safety application with Apple Watch integration (one-tap incident recording with GPS alerts to parents and schools), a home-services booking marketplace, and a memorial social platform with tribute pages and community features.

SELECTED PROJECTS

Dental Smile Design Platform

SceneKit-based clinical tool for dental professionals — 3D tooth model manipulation, measurement overlays from real patient data, and before/after smile simulation. Includes an offline-first data layer designed for reliable performance in low-connectivity clinic environments. Shipped on iPad, used in clinics across multiple countries.

AR Remote Assistance Platform

Enterprise ARKit + WebRTC application for industrial remote-assistance. Remote experts guide field technicians in real time via live video with collaborative AR annotations — spatial markers anchored to physical equipment as the camera moves. Validated against real industrial hardware on-site.

AR Measurement Tool

ARKit application for accurate real-world spatial measurement, fully on-device with no server dependency. Uses plane detection and hit-testing to calculate distances, rendered in SceneKit. Published on the US App Store.

Child Safety App with Apple Watch

Safety application with Apple Watch companion — a single tap records an incident, captures GPS location, and sends push alerts to parents and school administrators. Built with separate role-based modules (child, parent, school admin) synced through a shared real-time backend.

P2P Home Services Marketplace

Consumer marketplace for on-demand home services in the Israeli market. Features real-time provider matching, in-app messaging, ratings, and payment gateway integration. Included localisation and payment flows specific to the Israeli market.

TECHNICAL SKILLS

Languages	Swift (primary), Objective-C
Frameworks	UIKit, SwiftUI, Combine, Swift Concurrency (async/await, actors), Core Data, HealthKit
3D & AR	SceneKit, ARKit, RealityKit, 3D model operations
Realtime & Network	WebRTC, WebSockets, REST APIs, APNs, low-latency streaming
Architecture	MVVM, Clean Architecture, offline-first sync patterns
Testing & Quality	XCTest, unit testing, Crashlytics, Instruments, performance profiling
Tooling & Process	Xcode, Git, TestFlight, Agile/Scrum
Domain Experience	Dental/medical, industrial AR, safety, consumer

EDUCATION

Master of Computer Applications (MCA)

L.J. College of Engineering & Technology, GTU — Ahmedabad, India

2012 – 2015

Bachelor of Computer Applications (BCA)

Shree Dr. V.R. Godhaniya College of I.T. — Porbandar, India

2009 – 2012
